

# HINDS-BOCK

## MULTIPLE PISTON CONTINUOUS MOTION CONTAINER FILLER

High speed continuous motion filling of dressings, condiments, salads, soup, dips and other flowable products. Servo driven diving and travelling spout bridge moves the spouts in time with the containers which are captured by a timing screw. Many filling machines are available from two to eight pistons as well as servo pump fillers. Continuous motion filling increases filling speed improves downstream container handling and reduces the possibility of damaging containers.
