

HINDS-BOCK - P-16 AUTO-LIFT TRANSFER PUMP

The Hinds-Bock model P-16 Auto Lift Transfer Pump is ideal for Bakeries or production plants with limited floor space. It features a very rugged compact design that allows it to come apart in minutes with no tools. The Pump is powered in the up position and gravity lowers it down. It can handle a wide variety of products such as bakery batters, fillings and even products with small particulates. A high-low level probe sensor is optional for automatically starting and stopping the pump based on the level in the depositor hopper. Like all Hinds-Bock equipment is designed for multiple shifts a day production.
